How to unlock the VPN on Windows ?

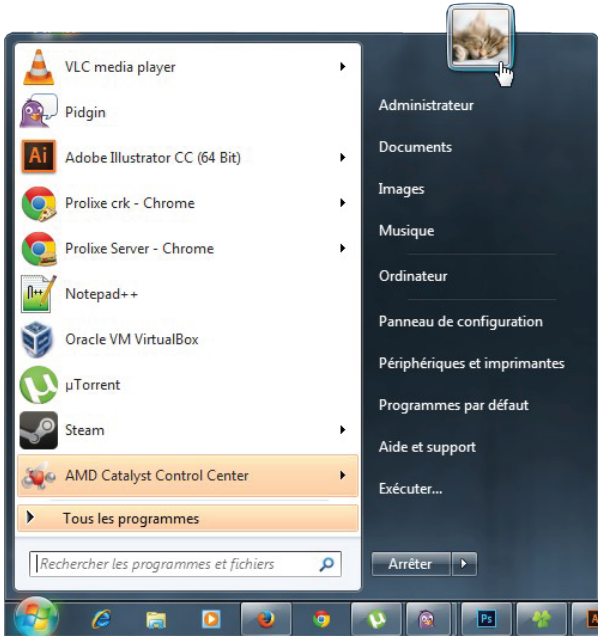

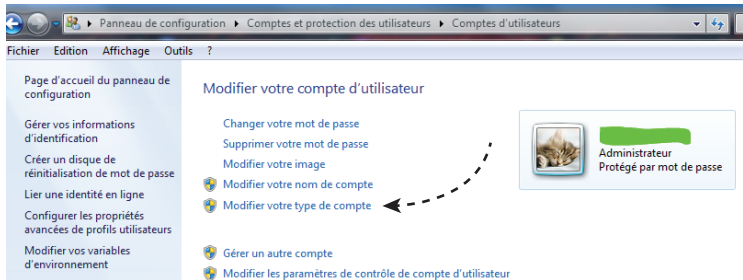

Here are some solutions to run correctly OpenVPN on Windows. A bad configuration in Windows can prevent the smooth running of OpenVPN.

Follow instruction below to try to solve your problem of connection to the VPN :

1 - You necessarily have to be on an Administrator account of Windows.

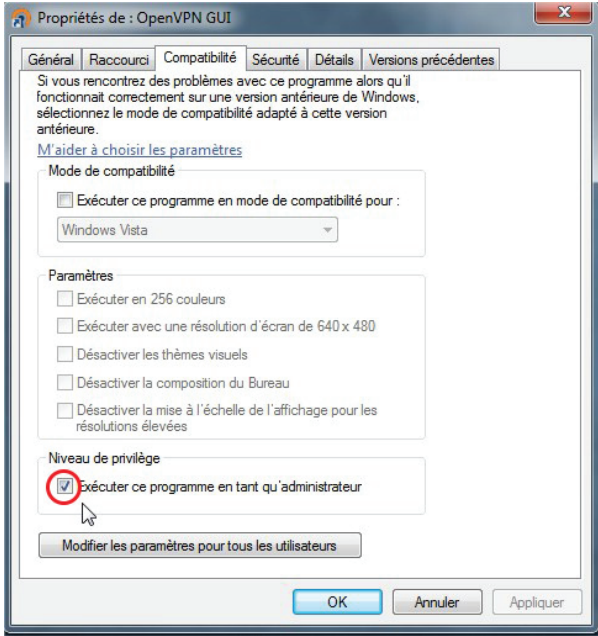

To know if you are Administrator, click "Start" then on your avatar.

If you have the option "To Modify your account type" then you be on an administrator account.

2 - You must run OpenVPN as administrator.

Right click on shortened icon of OpenVPN and select "Properties", in the "Compatibility" tab check the option "Run this program as an administrator".

3 - Allow OpenVPN in Windows firewall.

Open the "Control Panel" select "System and Security" and "Windows Firewall." In the left panel click on "Allow a program or feature through Windows Firewall".

If OpenVPN is not in the list click on "Allow another program" and find OpenVPN program.

By default in :

C:\Program Files\OpenVPN\bin\openvpn-gui.exe

or in C:\Program Files (x86)\OpenVPN\bin\openvpn-gui.exe

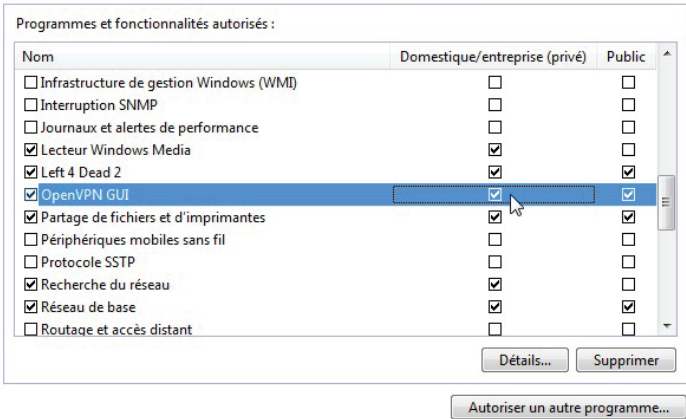

If you use Emule, it is advisable to authorize the program in the list to be "High ID".

Autoriser les programmes à communiquer à travers le Pare-feu Windows

Pour ajouter, modifier ou supprimer des programmes et des ports autorisés, cliquez sur Modifier les paramètres.

Quels sont les risques si un programme est autorisé à communiquer ?

Modifier les paramètres

4 - Configure your anti-virus and firewall.

If you use an antivirus or firewall other than Windows you need to configure it properly because it can block the VPN. To know if these programs cause problems, disable temporarily the protection program and connect you to the VPN.
